

The Hosting Service of Institutional Repositories (SARI) is intended to be used by any of the institutions of the scientific and higher education for hosting a repository with individualization of corporate identity itself. In addition to customizing the image repository, each institution may also establish and implement the settings and parameters that it considers appropriate to its organizational structure and its policies of self-archiving of publications and management of the repository.

The repositories available on this system are automatically indexed in the RCAAP Portal.

The Hosting Service of Institutional Repositories is supplied under SaaS, ie based on RCAAP infrastructure (hardware, hosting, connectivity, OS, applications, security perimeter, service, backups, monitoring and alarms) whose management and operation is done by project team.

The operation and administration of each institutional repository is the responsibility of member institutions. To facilitate these tasks, RCAAP team develops training activities.

The platform that supports the SARI is the [DSpace](#) developed by [MIT](#) and [HP](#) .

Periodically, nominations are open to service SARI. You can consult the [Service Conditions](#) to the Hosting Service of Institutional Repositories (SARI).
